

MINIHOOK

In tomato farming, the hooks and hangers are used for both growth guidance of tomato and the descent of the plant, once it had reached the required height.

In this manner, the tomato plant always develops upwards, receiving the maximum amount of light, thereby causing an enhancement the fruits quality and a productivity increase.

ADVANTAGES:

- ✓ **Enhance the plant's aeration** and avoids the touch of the fruits with the ground
- ✓ **Materials adjusted to environmental conditions**, resistant to high temperature and to the sunlight impact
- ✓ **Favours the seizing of the radiation** and facilitate the implementing of the cultural labours
- ✓ **Allows the absolute control of the plant's declining**, forming a flexible and safe guide of its growth

#	mm	Material	Color	Units/box	Palletizing
7504000	77	Polypropylene	● Black	4.200	25 boxes/pallet (105.000 units/pallet) Pallets/truck: 24 (2.520.000 units/truck)

Company certified ISO 9001
This standard focuses on customer satisfaction and the ability to provide products and services that meet the internal and external requirements of the organization.
